

5) of the subject matter and it is believed that examination of this claim would not unduly burden the Examiner with additional review issues.

Sequence Election

Applicants hereby elect the amino acid sequence of SEQ ID NO:2 [sequence group (b)] for search and examination. Applicants claim any nucleic acid sequence that encodes the amino acid sequence of SEQ ID NO:2, such as, for example, SEQ ID NO:1. However, applicants request Examiner rejoin the claims directed to SEQ ID NO: 1 and 3 upon allowance of the present invention.

In the Claims

Please cancel claims 1-3, 5-7, 10-12, and 14-23 as being directed to non-elected subject matter or being made redundant by way of the amendments below.

Please amend claims 4, 8 and 13 as follows:

Sub D'
4. (Amended) An isolated nucleic acid molecule consisting of a nucleotide sequence selected from the group consisting of:

(a) a nucleotide sequence that encodes a protein comprising the amino acid sequence of SEQ ID NO:2;

(b) a nucleic acid molecule consisting of the nucleic acid sequence of SEQ ID NO:1;

(c) a nucleic acid molecule consisting of the nucleic acid sequence of SEQ ID NO:3; and

(d) a nucleotide sequence that is completely complementary to a nucleotide sequence of (a)-(c).

B2 8. (Amended) A nucleic acid vector comprising a nucleic acid molecule of claim 4.

B₃

13. (Amended) A method for detecting the presence of a nucleic acid molecule of claim 4 in a sample, said method comprising

contacting the sample with an oligonucleotide comprising at least 20 contiguous nucleotides that hybridizes to said nucleic acid molecule under stringent conditions, wherein the stringent condition is hybridization in 6X sodium chloride/sodium citrate (SSC) at about 45°C, followed by one or more washes in 0.2 X SCC, 0.1% SDS at 50-65°C, and

determining whether the oligonucleotide binds to said nucleic acid molecule in the sample.

Please add the following new claims 24-29:

Sub-C1

--24. A process for producing a polypeptide comprising culturing the host cell of claim 9 under conditions sufficient for the production of said polypeptide, and recovering the peptide from the host cell culture.

B₄

25. An isolated polynucleotide consisting of a nucleotide sequence set forth in SEQ ID NO:1.

26. An isolated polynucleotide consisting of a nucleotide sequence set forth in SEQ ID NO:3.

27. A vector according to claim 8, wherein said vector is selected from the group consisting of a plasmid, virus, and bacteriophage.

28. A vector according to claim 8, wherein said isolated nucleic acid molecule is inserted into said vector in proper orientation and correct reading frame such that the protein of SEQ ID NO:2 may be expressed by a cell transformed with said vector.

29. A vector according to claim 28, wherein said isolated nucleic acid molecule is operatively linked to a promoter sequence. --
